La MULTIPLICACIÓN es una suma de sumandos iguales.
Hacemos una multiplicación cuando aumentamos un número 2, 3, 9... veces. El signo que representa la multiplicación es **x** que se lee «por».
Los números que se multiplican se llaman **FACTORES**. El primer factor se llama **MULTIPLICANDO** y el segundo, **MULTIPLICADOR**. El resultado que obtenemos se llama **PRODUCTO** de la multiplicación.

PROPIEDADES DE LA MULTIPLICACIÓN
Propiedad conmutativa:
Si en una multiplicación se cambia el orden de los factores se obtiene el mismo resultado.
 $2 \times 6 = 12$, $6 \times 2 = 12$

Propiedad asociativa:
Si en una multiplicación de tres o más factores se cambia la forma de agruparlos, se obtiene el mismo resultado.
 $5 \times (6 \times 4) = (5 \times 6) \times 4$

Propiedad distributiva de la multiplicación respecto de la suma:
Para multiplicar una suma por un número, se puede multiplicar cada sumando por el número y sumar los productos obtenidos.
 $(5 + 6) \times 4 = 5 \times 4 + 6 \times 4$

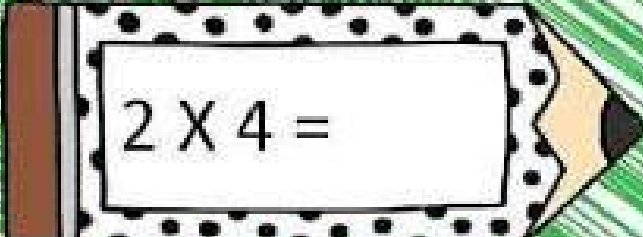

La propiedad distributiva de la multiplicación se aplica también respecto de la resta. Para multiplicar un número por una resta, se puede multiplicar el número por el minuendo y por el sustraendo y después restar los productos obtenidos.
 $(9 - 4) \times 3 = 9 \times 3 - 4 \times 3$

La MULTIPLICACIÓN es una suma de sumandos iguales.
 Hacemos una multiplicación cuando aumentamos un número 2,3,9... veces. El signo que representa la multiplicación es \times que se lee «por».
 Los números que se multiplican se llaman FACTORES. El primer factor se llama MULTIPLICANDO y el segundo, MULTIPLICADOR. El resultado que obtenemos se llama PRODUCTO de la multiplicación.

PROPIEDADES DE LA MULTIPLICACIÓN

Propiedad conmutativa:
 Si en una multiplicación se cambia el orden de los factores se obtiene el mismo resultado.
 $2 \times 6 = 12$, $6 \times 2 = 12$

Propiedad asociativa:
 Si en una multiplicación de tres o más factores se cambia la forma de agruparlos, se obtiene el mismo resultado.
 $5 \times (6 \times 4) = (5 \times 6) \times 4$

Propiedad distributiva de la multiplicación respecto de la suma:
 Para multiplicar una suma por un número, se puede multiplicar cada sumando por el número y sumar los productos obtenidos.
 $(5 + 6) \times 4 = 5 \times 4 + 6 \times 4$

La propiedad distributiva de la multiplicación se aplica también respecto de la resta. Para multiplicar un número por una resta, se puede multiplicar el número por el minuendo y por el sustraendo y después restar los productos obtenidos.
 $(9 - 4) \times 3 = 9 \times 3 - 4 \times 3$

La MULTIPLICACIÓN

La multiplicación es una operación matemática, que consiste en sumar varias veces un mismo número.

Así:

$$3 \times 4$$

indica que tenemos que sumar el número **3**, durante **4** veces, es decir:

$$3 + 3 + 3 + 3$$

Por tanto, la multiplicación se puede considerar como una suma repetida.

Comprobamos que el resultado es el mismo:

$$3 \times 4 = 12$$

$$3 + 3 + 3 + 3 = 12$$

SUMANDO Y MULTIPLICANDO

COMO TE DAS CUENTA,
MULTIPLICAR ES SUMAR
VARIAS VECES EL MISMO
NUMERO.

PRACTIQUEMOS CON
ALGUNOS EJERCICIOS

Completa las siguientes multiplicaciones como muestra
el ejemplo:

$$2 \times 3 = 6$$

$$2 + 2 + 2 = 6$$

$$4 \times 2 = \square$$
$$\square + \square = \square$$

$$7 \times 2 = \square$$
$$\square + \square = \square$$

6

$$4 \times 5 = \square$$

$$\square + \square + \square + \square + \square = \square$$

$$3 \times 3 = \square$$

$$\square + \square + \square = \square$$

$$7 \times 4 = \square$$

$$\square + \square + \square + \square = \square$$

$$3 \times 6 = \square$$

$$\square + \square + \square + \square + \square + \square = \square$$

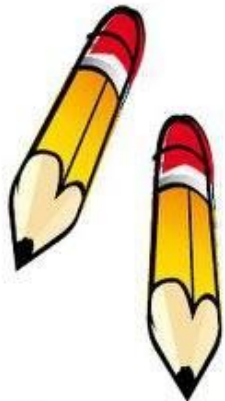

$$6 \times 5 = \square$$

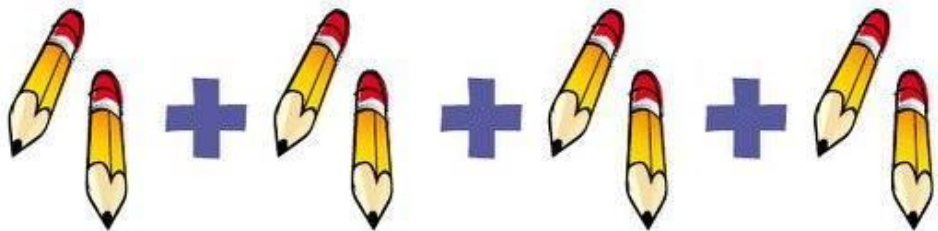

$$\square + \square + \square + \square + \square = \square$$

Multiplica y completa las sumas

 $\times 4 = \square$

 $+ + + + = \square$

 $\times 3 = \square$

$\square + \square + \square = \square$

6

$$6 \times 2 = \square$$

$$\square + \square = \square$$

$$\square + \square + \square + \square + \square = \square$$

$$7 \times \text{apple} = \square$$

$$\square + \square + \text{apple} + \square + \square + \text{apple} + \square = \square$$

$$3 \times \text{sunflower} = \square$$

$$\square + \square + \text{sunflower} = \square$$

Para aprender a multiplicar es necesario saber muy bien las tablas de multiplicar para poder realizar las operaciones de multiplicación, ya que una vez que sepas las tablas, multiplicar números grandes será muy fácil.

Así que ¡vamos a aprender a multiplicar!

MULTIPLICAR POR UN MULTIPLICADOR

Lo primero que debemos saber, son las partes que componen una multiplicación, las cuales se conforman por el **MULTIPLICANDO**, que es el número que vamos a multiplicar el **MULTIPLICADOR**, que es el número por el que lo vamos a multiplicar y el **PRODUCTO o RESULTADO**, que es el número obtenido luego de multiplicar un número en una cantidad determinada de veces. veamos el orden en el ejemplo siguiente:

$$\begin{array}{r} 24 \\ \times 5 \\ \hline 120 \end{array}$$

MULTIPLICANDO

SÍMBOLO **MULTIPLICADOR**

PRODUCTO

¿COMO MULTIPLICAR?

Para multiplicar dos números de varias cifras colocamos el multiplicando y debajo el multiplicador, trazando una raya por debajo de ambos. Comenzamos a multiplicar, de derecha a izquierda, la primera cifra del multiplicador por cada una de las cifras del multiplicando y vamos colocando las unidades de cada producto debajo de la raya, también de derecha a izquierda, y las decenas se las sumamos al siguiente producto.

$$\begin{array}{r} 24 \\ \times 5 \\ \hline 120 \end{array}$$

$5 \times 4 = 20$
subo el 2 al producto siguiente

$5 \times 2 = 10 + 2 = 12$

¿COMO MULTIPLICAR NUMEROS MÁS GRANDES?

Al igual que las multiplicaciones de multiplicandos de 2 cifras Comenzamos a multiplicar, de derecha a izquierda, la primera cifra del multiplicador por cada una de las cifras del multiplicando y vamos colocando las unidades de cada producto debajo de la raya, también de derecha a izquierda, y las decenas se las sumamos al siguiente producto y así sucesivamente con las otras cifras que tenga el "multiplicando"

La división es una operación matemática, elemental, inversa de la multiplicación y puede considerarse también como una resta repetida. así como la multiplicación aumenta de forma sucesiva, la división disminuye de la misma forma.

Aprendamos a dividir, ¡es muy fácil!

División entre un divisor

Una división se compone de las siguientes partes **DIVIDENDO**, que es el número que vamos a dividir el **DIVISOR**, que es el número entre el que lo vamos a dividir, el **COCIENTE o RESULTADO**, que es el número obtenido luego de dividir un número entre una cantidad determinada de veces y el **RESIDUO** que es el número sobrante de la división o indivisible veamos el orden en el ejemplo siguiente:

DIVIDENDO
35

DIVISOR
4

3

RESIDUO

8

COCIENTE

¿COMO DiViDiR?

Consiste en averiguar cuántas veces un número contiene a otro número, las reglas son las siguientes:

- Se divide de izquierda a derecha,
- se reparten las cifras del dividendo entre las del divisor, se divide utilizando las tablas del multiplicar al revés es decir $15 \div 3$ equivale a buscar en la tabla del 3 un número que su resultado sea 15 o el más cercano,
- Se multiplica esta cifra del cociente por el divisor y se resta del dividendo; si no se puede restar se intenta con un número menor.
- Se toma la siguiente cifra del dividendo inicial y se repite el proceso hasta haber tomado todas las cifras.

veamos el ejemplo:

$$\begin{array}{r} 7 \overline{) 3} \\ 1 \quad 2 \end{array}$$

$$2 \times 3 = 6 \text{ a } 7 \text{ SOBRe } 1$$

el sobrante lo bajo del dividendo

$$7 \div 3 = 2 \text{ Y SOBRe } 1$$

PRacticando

Resolvamos esta sencilla división

• Como el primer numero del dividendo es igual al divisor lo separamos y buscamos en la tabla del 2 que numero multiplicado por 2 es igual a 2 o el más aproximado... exacto es el 1, asi que colocamos el 1 en el lugar del cociente y multiplicamos 1×2 y lo restamos de 2 y decimos de 2 a 2 van cero y ubicamos el cero debajo del 2.

• Bajamos el 4 y buscamos en la tabla del 2 que numero multiplicado por 2 es igual a 4 o el más aproximado... exacto es el 2, asi que colocamos el 2 en el lugar del cociente y multiplicamos 2×2 y lo restamos de 4 y decimos de 4 a 4 van cero y ubicamos el cero debajo del 4.

• Bajamos el 5 y buscamos en la tabla del 2 que numero multiplicado por 2 es igual a 5 o el más aproximado... exacto es el 2, asi que colocamos el 2 en el lugar del cociente y multiplicamos 2×2 y lo restamos de 5 y decimos de 4 a 5 sobra 1 y ubicamos el 1 debajo del 5.

Finalmente decimos:

$$245 \div 2 = 122 \text{ y sobra } 1$$

$$\begin{array}{r} 245 \quad | \quad 2 \\ \underline{04} \\ 05 \\ \underline{10} \\ 122 \\ \underline{122} \\ 0 \end{array}$$

resuelve las siguientes divisiones

$$82 \overline{)4} \underline{\hspace{1cm}}$$

$$22 \overline{)2} \underline{\hspace{1cm}}$$

$$75 \overline{)6} \underline{\hspace{1cm}}$$

$$38 \overline{)9} \underline{\hspace{1cm}}$$

$$45 \overline{)4} \underline{\hspace{1cm}}$$

Juego usando la tabla pitagórica

Se juega en parejas.

Materiales: Una tabla pitagórica y dos juegos de tarjetas con distintos colores del 1 al 10 para cada integrante.

El producto de dos números es el número de la casilla donde se cruzan la horizontal de uno con la vertical del otro.

El nombre de la tabla se debe a su creador, Pitágoras de Samos, uno de los más importantes matemáticos y filósofos de la Grecia antigua.

Reglas:

Cada jugador tiene sus cartas en dos pilas, cada uno de un color, boca abajo y mezcladas.

Retira dos tarjetas, una de cada color, realiza el producto de las mismas y coloca una cruz en el resultado de su tabla pitagórica.

Se alternan los turnos y cada uno marca los resultados en su tabla. Sólo se puede marcar un resultado por vez.

Gana el primero que llena una línea horizontal, vertical o diagonal.
